## DESCRIPTION

- The mask is not a sterilised product.
- The materials are tested and do not present any kind of toxicity
- The mask may undergo high temperature washing at 90°/194F, and may undergo sterilization.
- The mask MS02 is a PPE able to fulfill the characteristics required by the WHO.
- The mask has no deadline.

- USE The cotton mask must be sterilized and/or disinfected before the use.

## INSTRUCTION FOR USE

- Washing the mask with high temperature water at 60°/140F and a specific additive for disinfection, before using. If possible and available, proceed with sterilization in autoclave.
- Before using the mask, wash carefully the hands with soap and water, or with an alcoholic solution.
- Covering mouth and nose with the mask, make sure of the intactness of it and that it fits snugly at the face.
- Avoid touching the mask while you are wearing it.
- Replace the mask with a new one after the use, touch only the laces while you are changing the mask without getting in contact with the frontal part of the mask. Have care to put the used one in a bag before the washing process, eventually followed by a cycle of sterilization.
- You can reuse the mask only after having followed the correct washing system and /or sterilization. We suggest to put the washed mask in a single-use bag or to keep it inside the sterilized autoclavable disposal bag till the use.
- The mask must not be used when the fabric is not intact anymore.
- When the mask is used by an underage child, the application, the putting off and the correct use must be managed by an adult.
- The mask is for a personal use only; do not share it with other people.
